

Zoonotic & Vector-borne Disease Workshop 2010

The 2010 Zoonotic and Vector-borne Disease Workshop offers public health information on a variety of emerging and endemic zoonoses affecting our state. Learn the latest about these important animal to human diseases and network with professionals who are dedicated to reducing their impact on public health.

Featured Topics

- 2009 Environmental and Human Zoonotic Disease Highlights
- Animal Hoarding
- Communicating Risk
- *Cryptococcus*
- Emerging Zoonotic Diseases
- Plague
- Role of Veterinary Reserve Corps in Emergency Response
- Raw Milk

Who Should Attend

The workshop is designed for public health and other professionals with an interest in emerging and endemic zoonoses, disease prevention, and preparedness issues. This includes professionals in local health, veterinary medicine, wildlife rehabilitation, and animal and pest control.

Continuing Educational Credits

Certification of attendance will be made available for continuing educational credits. Attendees will be able to use this certificate along with the timed agenda to obtain their continuing educational credits.

Presentations

Print versions of the presentations will be posted here prior to the first workshop.
